

EXTRACTS & AROMATIC PRODUCTS

— SINCE 1865 —

THE NATURE, OUR CULTURE

Farmers and processors in the Grasse region, the Mul family have been working for 5 generations to develop the Fragrance, Aromatic and Medicinal Plants (PPAM) industries.

The development of the extraction and distillation in the 1970s has given the Group a unique position: control of the production chain and complete traceability from the plant to the aromatic products. By setting up sustainable supply chains, we can offer traceable products with monitored quality and a guarantee of respect for human rights and the environment.

TRADITION & KNOW-HOW

The MUL family has historically owned agricultural land in the Grasse region. The group's culture has been founded on the following principles:

- Respecting and developing tradition;
- Mastering of the entire production chain;
- Growing botanical that respect the environment.

This know-how, combined with the fact that the land is farmed by our company itself, means that we guarantee traceability and security of supply, as well as innovation with new farming practices.

To recognise and promote know-how based on local history, as well as the quality and authenticity of products.

Supporting, accompanying and innovating in agriculture through 3 schemes:

- Creation of partnerships with identified producers;
- Support for existing cooperatives;
- Development of our own plots.

BOTANICAL EXPERTISE

THE GROUP SPECIALISES IN SOURCING PLANTS FOR THE PRODUCTION OF ITS NATURAL INGREDIENTS.

This expertise (selection, quality monitoring) is reinforced by the activities of:

- **Treatment of plants** prior to extraction and distillation:
 - Crushing (cutters, hammers, impact);
 - Sieving;
 - Drying (oven, dehumidification chamber, solar dryer);
 - Steam debacterizing;
- **Recovery of by-products** from extraction and distillation operations (plant dregs);
- **Reducing environmental impact.**

A **guarantee** that the **active and organoleptic properties** of **plant** raw materials will be preserved, in line with the downstream expectations of the food, cosmetics and nutraceutical industries.

This activity complements our expertise in plants and gives stability to our supply chains for agricultural raw materials.

A HIGH-PERFORMANCE INDUSTRIAL FACILITIES

Pilot and production equipment for the extraction and distillation of natural raw materials:

- Series soxhlet extractors, ultrasonic;
- Hydrodistillers of different capacities;
- Liquid and powder mixers of various capacities;
- Rectification and deterpenation columns.

A laboratory for analysis: organoleptic, physicochemical, microbiological and contaminant analysis.

A range of extracts for the flavour and fragrance industry, food, cosmetics and perfumery:

- **Concretes, resinoids and absolutes:** extraction using volatile solvents;
- **Oleoresins and extracts** at different concentration: extraction with ethyl alcohol;
- **Infusions:** gentle extraction with ethyl alcohol;
- **Alcoholates and distillates:** alcoholic distillation;
- **Essential oils and floral waters:** hydrodistillation or direct steam distillation;
- **Extracts and aromatic products**, in solid or liquid form: blends;
- **Floral waxes:** oil soluble by-products from concentrated extracts.

BROWN NOTES,
OUR SPECIALITIES

SUSTAINABLE SOURCING

THE MUL GROUP MANAGES AND INTEGRATES THE SUPPLY CHAIN FOR NATURAL PLANT-BASED RAW MATERIALS:

Our strategy of securing raw material supply chains is at the root of our positioning and differentiation in aromatic extracts.

- **Reliable, secure** and **responsible** sourcing that guarantees **certified origin** and full traceability;
- Selection of the best **quality** raw materials;
- A **commitment** to local producers and communities through sustainable business models;
- Total **transparency** to guarantee the quality and security of the material (reducing the environmental impact of agricultural crops, committed block-chains as laboratory for social innovation).
